INSPECTION REPORT COMMENTS

Permit No. ACT/015/025

Inspection Date 5/17/90

Please number comments to correspond with topics on previous page.

✓ Topsoil. The topsoil pile at the lower end of the mine site should be seeded. Two options were discussed with the operator as follows:

OPTION I: Reseed this spring (1990) with site preparation and seed mixture as specified in the mine plan. The seeded area would be sprinkled irrigated.

OPTION II: Reseed this spring (1990) with site preparation and an annual rye as approved by the Division as an interim measure. Reseed area in the fall of 1990 as noted in option I above.

Discussed this matter with Mr. Owen and he advised that they are currently improving the water system to the ball field and could seed the area the first part of June.

✓ Road. The operator was requested to increase the dust abatement measures. The mine site is extremely dry which adds to the problem of keeping the roads & coal hauling and loading areas watered. During the latter part of the day the areas in question were being walked.

{Co-op. Chipping Co: Gerald Hansen; Kim Mangum
